

Back Water Valves

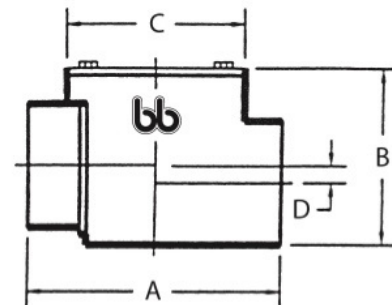

Bibby's Back Water Valves utilize an internal flapper to help stop wastewater from the public sewer line from flowing back into basements, bathrooms, or floor drains during heavy rain, flooding, or sewer blockages.

Under normal conditions, the internal flapper will stay open to allow waste to flow out of the building freely.

* Hub & Spigot BWV must use a Bi-Seal Gasket to connect pipe to the fitting.*

Back Water Valves – Hubless

Size	A	B	C	D
3	8	5 1/2	5 5/8	5/8
